## BOLTS AND TORQUE SPECS

Always use the proper grade fastener. You should use at least grade 5 fasteners on almost everything automotive. Bolts are graded by tensile strength and are easily identified by the number of slash marks on the head of the bolt. The more marks the higher the quality. Hardware store bolts with no markings on top are usually soft, mild steel, grade 2 quality and should be avoided like the plague.

Another thing to watch is torque specs. A bolt that has been over tightened can be just as lethal as one that hasn't been tightened enough. A bolt that has been tightened beyond recommended torque specs can easily break in service. Also, keep in mind that torque specs will be less for bolts that have oil or lubricate on them than for clean, dry bolts. Use the following tables to determine bolt grade and torque specs.

## U.S. BOLT GRADES

|  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SAE 2 |  | SAE 5 | SAE 7 |  |  |
|  | 2 | 5 | 7 | 8 | SOCKET HEAD CAP SCREW |
| I.D. Marks | No markings | 3 lines | 5 lines | 6 lines | Allen head |
| Material | Low carbon | Mediumcarbon, tempered | Mediumcarbon, quenched \& tempered | Mediumcarbon, quenched \& tempered | High-carbon, quenched \& tempered |
| Tensile strength (Minimum) | $\begin{aligned} & 74,000 \\ & \mathrm{psi} \end{aligned}$ | 120,000 psi | $\begin{aligned} & \text { 133,000 } \\ & \text { psi } \end{aligned}$ | 150,000 psi | 160,000 psi |

## U.S. BOLT TORQUE SPECIFICATIONS

Torque in pounds-foot

|  |  | 2 | 2 | 5 | 5 | 7 | 7 | 8 | 8 | Socket head cap screw | Socket head cap screw |
